## Graham Lloyd

Graham Lloyd is a regulatory consultant with more than 25 years experience in European regulation of the chemical industry; he works directly on a broad range of UK, and other national regulatory programs. In addition, he is widely recognized for his leading role in the industry response to the Biocidal Products Directive.

Mr. Lloyd counsels clients in all aspects of chemical regulatory affairs, from ensuring compliance with the many EU directives and regulations applicable to the chemical industry, to comprehensive monitoring and analysis of emerging regulatory initiatives

### **Biocidal Products Directive**

Mr. Lloyd had a leading role on behalf of industry working with the Commission and Member states in the development of the BPD. He has been involved in the BPD since its conception by the European Union, and is intimately familiar with its provisions and the history behind them. He also has represented industry on the OECD Biocides Steering group and was an industry delegate at the EU Competent Authority meetings. He has been responsible for preparing notification documentation, including dossiers, for a number of active substances. Mr. Lloyd also has been active with several consortia responsible for ensuring the continued use of particular active substances under the BPD.

Mr. Lloyd is particularly well qualified to determine the toxicology and other scientific data necessary for registration purposes, to identify sources of data that may already exist to fill these data needs, and, if necessary, to place and supervise completion of studies.

### **National Regulation of Biocidal Products**

Mr. Lloyd also has a wealth of experience working with national regulatory schemes for the registration of biocidal products. These schemes remain in force until active substances and formulated products are registered under the BPD, which could be many years in the future. He has experience with registrations and consortium management to meet national requirements in all EU member states, including the UK and the particularly challenging schemes in Sweden, Belgium and the Netherlands.

### **Coordination with US Biocidal Product Registration Activities**

Through his long experience with companies marketing biocidal products in both the United States and European Union, Mr. Lloyd has developed a thorough understanding of the US registration process, including procedures, data requirements, and data protection.

### **New and Existing Chemicals Regulatory Programs**

Mr. Lloyd also has extensive experience in chemical regulatory affairs beyond biocides regulation. He offers clients his years of experience in ensuring

## Graham Lloyd

compliance with the many EU directives and regulations applicable to the chemical industry, including the established directives concerning chemical classification, labeling and packaging, environmental exposure, and disposal. Mr. Lloyd brings to clients this experience in working with industry associations, the European Commission, and other EU institutions to influence initiatives such as this before they become law, and in working to implement programs in the Member States in a way that is fair to the chemical industry.
